Acunetix Security Audit

26 November 2019

Scan of pttgweb3.pttgrp.com

Scan details

Scan information	
Start time	26/11/2019, 14:53:50
Start url	https://pttgweb3.pttgrp.com/PTT-Pre-Registration/
Host	pttgweb3.pttgrp.com
Scan time	39 minutes, 32 seconds
Profile	Full Scan
Server information	Microsoft-IIS/8.5
Responsive	True
Server OS	Windows
Server technologies	ASP

Threat level

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts details

⊗ HTTP.sys remote code execution vulnerability

Severity	**High**
Reported by module	/Scripts/PostCrawl/MS15-034.script

Description

A remote code execution vulnerability exists in the HTTP protocol stack (HTTP.sys) that is caused when HTTP.sys improperly parses specially crafted HTTP requests. An attacker who successfully exploited this vulnerability could execute arbitrary code in the context of the System account.

This security update is rated Critical for all supported editions of Windows 7, Windows Server 2008 R2, Windows 8, Windows Server 2012, Windows 8.1, and Windows Server 2012 R2.

Impact

An attacker may execute arbitrary code in the context of the System account by sending a specially crafted HTTP request to the affected system.

Recommendation

Microsoft has provided a security update for this issue. It's recommended to apply this update as soon as possible.

🔔 Application error message

Severity	**Medium**
Reported by module	/Scripts/PerScheme/XSS.script

Description

This alert requires manual confirmation

Application error or warning messages may expose sensitive information about an application's internal workings to an attacker.

Acunetix found an error or warning message that may disclose sensitive information. The message may also contain the location of the file that produced an unhandled exception. Consult the 'Attack details' section for more information about the affected page.

Impact

Error messages may disclose sensitive information which can be used to escalate attacks.

Recommendation

Verify that this page is disclosing error or warning messages and properly configure the application to log errors to a file instead of displaying the error to the user.

⚠ Error message on page

Severity	Medium
Reported by module	/Scripts/PerFile/Text_Search_File.script

Description

This alert requires manual confirmation

Application error or warning messages may expose sensitive information about an application's internal workings to an attacker.

Acunetix found an error or warning message that may disclose sensitive information. The message may also contain the location of the file that produced an unhandled exception. Consult the 'Attack details' section for more information about the affected page.

Impact

Error messages may disclose sensitive information which can be used to escalate attacks.

Recommendation

Verify that this page is disclosing error or warning messages and properly configure the application to log errors to a file instead of displaying the error to the user.

⚠ RC4 cipher suites detected

Severity	**Medium**
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

A group of researchers (Nadhem AlFardan, Dan Bernstein, Kenny Paterson, Bertram Poettering and Jacob Schuldt) have found new attacks against TLS that allows an attacker to recover a limited amount of plaintext from a TLS connection when RC4 encryption is used. The attacks arise from statistical flaws in the keystream generated by the RC4 algorithm which become apparent in TLS ciphertexts when the same plaintext is repeatedly encrypted.

Impact

An attacker can recover a limited amount of plaintext from a TLS connection when RC4 encryption is used.

Recommendation

The most effective countermeasure against this attack is to stop using RC4 in TLS. Consult web references for more information about this attack and how to protect against it.

⚠ The POODLE attack (SSLv3 supported)

Severity	**Medium**
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

Websites that support SSLv3 and CBC-mode ciphers are potentially vulnerable to an active MITM (Man-in-the-middle) attack. This attack, called POODLE, is similar to the BEAST attack and also allows a network attacker to extract the plaintext of targeted parts of an SSL connection, usually cookie data. Unlike the BEAST attack, it doesn't require such extensive control of the format of the plaintext and thus is more practical.

Any website that supports SSLv3 is vulnerable to POODLE, even if it also supports more recent versions of TLS. SSLv3 is disabled by default in Firefox 34, which was released on Nov 25 2014.

Impact

An attacker may be able to exploit this problem to conduct man-in-the-middle attacks and decrypt communications between the affected service and clients.

Recommendation

It's recommended to disable SSLv3 and replace it with TLS 1.2 or higher

To disable SSLv2 and SSLv3:
For Apache:
SSLProtocol all -SSLv2 -SSLv3
For Nginx:
ssl_protocols TLSv1.2;

Request headers

⚠ TLS 1.0 enabled

Severity	Medium
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

The web server supports encryption through TLS 1.0. TLS 1.0 is not considered to be "strong cryptography" as defined and required by the PCI Data Security Standard 3.2(.1) when used to protect sensitive information transferred to or from web sites. According to PCI, "30 June 2018 is the deadline for disabling SSL/early TLS and implementing a more secure encryption protocol – TLS 1.1 or higher (TLS v1.2 is strongly encouraged) in order to meet the PCI Data Security Standard (PCI DSS) for safeguarding payment data.

Impact

An attacker may be able to exploit this problem to conduct man-in-the-middle attacks and decrypt communications between the affected service and clients.

Recommendation

It is recommended to disable TLS 1.0 and replace it with TLS 1.2 or higher.

ⓘ ASP.NET debugging enabled

Severity	**Low**
Reported by module	/Scripts/PerFolder/ASP-NET_Debugging_Enabled.script

Description

ASP.NET debugging is enabled on this application. It is recommended to disable debug mode before deploying a
production application. By default, debugging is disabled, and although debugging is frequently enabled to troubleshoot a
problem, it is also frequently not disabled again after the problem is resolved.

Impact

It may be possible that sensitive information about the web sever is disclosed through the ASP.NET application.

Recommendation

Check References for details on how to fix this problem.

ⓘ ASP.NET version disclosure

Severity	**Low**
Reported by module	/Scripts/PerServer/ASP_NET_Error_Message.script

Description

The HTTP responses returned by this web application include anheader named **X-AspNet-Version**. The value of this header is used by Visual Studio to determine which version of ASP.NET is in use. It is not necessary for production sites and should be disabled.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Apply the following changes to the web.config file to prevent ASP.NET version disclosure:

```
<System.Web>

 <httpRuntime enableVersionHeader="false" />

</System.Web>
```

References

HttpRuntimeSection.EnableVersionHeader Property (https://docs.microsoft.com/en-us/dotnet/api/system.web.configuration.httpruntimesection.enableversionheader?redirectedfrom=MSDN&view=netframework-4.8#System_Web_Configuration_HttpRuntimeSection_EnableVersionHeader)

```

ⓘ Clickjacking: X-Frame-Options header missing

Severity	Low
Reported by module	/Scripts/PerServer/Clickjacking_X_Frame_Options.script

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an **X-Frame-Options** header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header and a CSP header with frame-ancestors directive. Consult Web references for more information about the possible values for this header.

References

ⓘ Login page password-guessing attack

Severity	**Low**
Reported by module	/Scripts/PerScheme/Html_Authentication_Audit.script

Description

A common threat web developers face is a password-guessing attack known as a brute force attack. A brute-force attack is an attempt to discover a password by systematically trying every possible combination of letters, numbers, and symbols until you discover the one correct combination that works.

This login page doesn't have any protection against password-guessing attacks (brute force attacks). It's recommended to implement some type of account lockout after a defined number of incorrect password attempts. Consult Web references for more information about fixing this problem.

Impact

An attacker may attempt to discover a weak password by systematically trying every possible combination of letters, numbers, and symbols until it discovers the one correct combination that works.

Recommendation

It's recommended to implement some type of account lockout after a defined number of incorrect password attempts.

ⓘ Stack Trace Disclosure (ASP.NET)

Severity	**Low**
Reported by module	/httpdata/text_search.js

Description

A stack trace was identified on this page. The web application has generated an error message that includes sensitive information about its environment, users, or associated data.

The stack trace can disclose potentially sensitive information such as: physical file paths of relevant files, source code fragments, version information of various packages, database information, error messages, ...

It's recommended to handle exceptions internally and do not display errors containing potentially sensitive information to a user.

Impact

The stack trace may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

To prevent the information disclosure you can implement custom error pages by applying the following changes to your **web.config** file.

```
<System.Web>

     <customErrors mode="On" defaultRedirect="~/error/GeneralError.aspx">

          <error statusCode="403" redirect="~/error/Forbidden.aspx" />

          <error statusCode="404" redirect="~/error/PageNotFound.aspx" />

          <error statusCode="500" redirect="~/error/InternalError.aspx" />

     </customErrors>

</System.Web>

ⓘ Content Security Policy (CSP) not implemented

Severity	Informational
Reported by module	/httpdata/CSP_not_implemented.js

Description

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for the all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

```
Content-Security-Policy:

    default-src 'self';

    script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

Impact

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.

ⓘ Content type is not specified

Severity	Informational
Reported by module	/RPA/Content_Type_Missing.js

Description

This page does not set a Content-Type header value. This value informs the browser what kind of data to expect. If this header is missing, the browser may incorrectly handle the data. This could lead to security problems.

Impact

None

Recommendation

Set a Content-Type header value for this page.

ⓘ Microsoft IIS version disclosure

Severity	Informational
Reported by module	/Scripts/PerServer/ASP_NET_Error_Message.script

Description

The HTTP responses returned by this web application include a header named **Server**. The value of this header includes the version of Microsoft IIS server.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Microsoft IIS should be configured to remove unwanted HTTP response headers from the response. Consult web references for more information.

References

Remove Unwanted HTTP Response Headers (https://blogs.msdn.microsoft.com/varunm/2013/04/23/remove-unwanted-http-response-headers/)

ⓘ Password type input with auto-complete enabled

Severity	Informational
Reported by module	/Crawler/12-Crawler_Password_Input_Autocomplete.js

Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved.Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

Impact

Possible sensitive information disclosure.

Recommendation

The password auto-complete should be disabled in sensitive applications.
To disable auto-complete, you may use a code similar to:

```
<INPUT TYPE="password" AUTOCOMPLETE="off">
```

ⓘ TLS 1.1 enabled

Severity	Informational
Reported by module	/Scripts/PerServer/SSL_Audit.script

Description

The web server supports encryption through TLS 1.1. When aiming for Payment Card Industry (PCI) Data Security Standard (DSS) compliance, it is recommended (although at the time or writing not required) to use TLS 1.2 or higher instead. According to PCI, "30 June 2018 is the deadline for disabling SSL/early TLS and implementing a more secure encryption protocol – TLS 1.1 or higher (TLS v1.2 is strongly encouraged) in order to meet the PCI Data Security Standard (PCI DSS) for safeguarding payment data.

Impact

An attacker may be able to exploit this problem to conduct man-in-the-middle attacks and decrypt communications between the affected service and clients.

Recommendation

It is recommended to disable TLS 1.1 and replace it with TLS 1.2 or higher.

References

Are You Ready for 30 June 2018? Saying Goodbye to SSL/early TLS (https://blog.pcisecuritystandards.org/are-you-ready-for-30-june-2018-sayin-goodbye-to-ssl-early-tls)

Affected items

Web Server
Details
The SSL server (port: 443) encrypts traffic using TLSv1.1.
Request headers

ⓘ Web Application Firewall detected

Severity	Informational
Reported by module	/Scripts/PerServer/WAF_Detection.script

Description

This server is protected by an IPS (Intrusion Prevention System), IDS (Intrusion Detection System) or an WAF (Web Application Firewall). Acunetix detected this by sending various malicious payloads and detecting changes in the response code, headers and body.

Impact

You may receive incorrect/incomplete results when scanning a server protected by an IPS/IDS/WAF. Also, if the WAF detects a number of attacks coming from the scanner, the IP address can be blocked after a few attempts.

Recommendation

If possible, it's recommended to scan an internal (development) version of the web application where the WAF is not active.

Affected items
